

Reimer Mobile Concrete Mixer Model R10
 Technical Information ▼

The **Reimer Mobile Concrete Mixer** is uniquely different than the conventional “drum type” transit mixer. All of the components of concrete – stone, sand, cement and water are loaded into separate compartments on one truck-mounted unit. The components are metered and mixed into fresh concrete in a special auger as the Mobile Mixer unit is being discharged.

Model R10 Technical information:

Capacity	9.5 cubic yards/7.5 cubic metres
Production Rate	Variable up to 75 cubic yards (60 cubic metres) per hour maximum
Hydraulic Pump	Load sensing, PFC, variable displacement, piston type tandem hydraulic pump
